SBL

SBLw

Joint detail

SBL strips can be cut to length every 25 mm.

Waterproof SBLw

SBLw strips waterproof to IP67 for external use or with kitchen equipment.

We stock a full range of LED drivers to suit different lengths of SBL / SBLw.

## Super Bright LED strips

SBL / SBLw are flexible very high brightness LED strips, suitable for illuminating very thin signs, double-sided signs, kitchen equipment and for accent lighting on furniture.

With a light output of 1380-1440 Lumens per meter, this is the brightest strip on the market. The heat transfer adhesive allows the strip to fix directly to the sign case without heat sink or lens. Signs cases with an internal depth of as small as 11 mm can be illuminated. Excellent for double sided signs.

The SBL strips can be cut to length every 3 LEDs or 25mm, making it possible to tailor make the lighting to fit the product.

We manufacture SBL and SBLw strips in 5M reels and supply them with a range of LED drivers. Call us for a quote for different lengths and colours. Also available in Warm White, Red, Yellow, Green, Blue and RGB colours.
